Surgical Technology Major Highlights April 2009

<u>Overview</u>

The information contained in this binder represents supporting reports and data associated with the CRC's review of the Surgical Technology program. These reports are intended to provide a historical perspective, as well as an idea of current strengths and future challenges facing the program which may impact short and long term curriculum development.

Major Highlights

- In terms of assessing student learning the Surgical Technology program has articulated six learning outcomes and nineteen benchmarks, which is in accordance with the requirements established by the Student Outcomes Assessment Committee (SOAC) and affirmed by the Chancellor's Cabinet. However, there is no time table for the implementation of the student learning assessments. Specific dates must be identified in order for the plan to be in compliance with all guidelines established by SOAC and OAE.
- Throughout 2008, no assessment of student learning was undertaken in accordance with the student learning assessment plan. Although courses were offered, the Program Coordinator position was vacant for most of the year which caused a void in the implementation process.
- The overall composite dashboard score for the Surgical Technology program has declined over the past three years and at 9.08 in 2007-08, it ranked 45th out of all OCC curriculum. The downward trend is mostly driven by the declining percent of sections filled to capacity, as well as the fall in the number of minority students enrolled in SUR courses.
- More specifically, the number of SUR sections filled to capacity recently fell to 52%, which is well below the college-wide average of 86%, while the percent of minority students fell sharply from 46% in 2005-06 to 18% in 2007-08.
- On a positive note, two of the seven dashboard measures exceeded the established benchmarks in 2007-08. Although the percent of students completing SUR courses with a grade of "C" or higher has declined over the last three years, 87% of the students successfully pass their SUR courses. Moreover, this rate surpasses the college-wide average of 67%. Also, in the most recent reporting year, no SUR courses were cancelled.
- Since the inception of the Surgical Technology program in 2000, the number of credit hours has experienced considerable fluctuation. The program generated the greatest number of credit hours during the 2005-06 academic year. However, since then the number of credit hours has declined.
- In the programs history, a total of 77 Associate Degrees have been awarded which equates to an average of 11 degrees per year. In terms of the number of degrees awarded the program ranks 12th highest of all curriculum at OCC in 2007-08.
- Based on the most current labor market data, the Surgical Technologist occupation is projected to see moderate growth over the next five years in the four-county region of Southeast Michigan. Over 100 new jobs are projected for this occupation, while an additional 164 replacement job openings may need to be filled by 2014.

Last Revised 8/21/2008

Statement of Purpose

Reflect College mission, values, and goals; prepare students to be competent surgical technologists.

Friday, March 27, 2009

Learning Outcome

Students will integrate knowledge synthesized from surgical technology, the humanities and biological, behavioral and social sciences into the practice of surgical technology.

| Benchmark | | Assessment Method | Assessment Date | |
|-----------|--|--|-----------------|--|
| 767.1A | 80% of the students will pass the PAE exam by a score of 80% or higher. | PAE Course Final Exams. | | |
| 767.1B | 80% of the students will be rated on their knowledge of surgical technology at 85% or higher. | Cognitive evaluation sections of the final Clinical Skills Evaluation (SUR 1510). | 9/1/2009 | |
| 767.1C | 80% of the students will pass the clinical skills component of each SUR course at 85% or higher. | Clinical Skills Evaluation and clinical skills components of the Final Exams. | | |

t

Learning Outcome

Students will utilize clinical judgment and critical thinking in the performance of duties of the surgical technologist.

| Benchm | ark | Assessment Method |
|--------|---|---|
| 767.2A | 80% of the students will pass the Liaison Council Certification for the Surgical Technologist Exam (LCC- ST) by a score of greater than or equal to 80%. | Liaison Council for Certification of the Surgical Technologist National Certification Exam. |
| 767.2B | 80% of the students will be rated on their application of surgical technology skills at greater than or equal to 85% following the clinical Evaluation Tool. | Clinical Evaluation Tools. |
| 767.2C | 80% of the students will use available information to determine interventions and evaluate care at greater than or equal to 85% competency following the Clinical Performance Evaluation. | Clinical Performance Evaluation. |
| 767.2D | 80% of the students will make sound clinical decisions 85% of the time in the clinical setting. | Clinical Evaluation Tools. |

Assessment Date

Learning Outcome

Students will be able to competently perform the technical skills required for safe surgical technology.

| Benchm | ark | Assessment Method | Assessment Date |
|--------|---|----------------------------|-----------------|
| 767.3A | 80% of the students will pass the theory component of SUR courses final exams with a score of 85% or higher. | SUR courses final exams. | |
| 767.3B | 80% of the students will successfully pass all critical thinking components of the competency assessments with a score of greater than or equal to 3 on the clinical evaluation tools. | Clinical evaluation tools. | |
| 767.3C | 80% of the students will pass the clinical component of SUR courses at greater than or equal to 85%. | SUR courses final exams. | |
| 767.3D | 80% of the students will incorporate knowledge of pharmacological agents in the practice of safe surgical care at greater than or equal to 85%. | Clinical evaluation tool. | |

Learning Outcome

.

Students will be able to utilize the principles of patient care in the practice of surgical technology.

| Benchmark | | Assessment Method | Assessment Date |
|-----------|--|----------------------------|-----------------|
| 767.4A | 80% of the students will achieve greater than or equal to 85% on the course exams covering patient care. | Course final exams. | |
| 767.4B | 80% of the students will achieve greater than or equal to 85% on the clinical evaluations for utilizing patient care principles. | Clinical evaluation tools. | |
| 767.4C | 80% of the students will be rater at greater than or equal to 3 on the employer survey in the areas related to the use of patient care principles. | Employer survey. | |

| Students | will function effectively and safely as a team member. | |
|----------|--|---------------------|
| Benchm | ark | Assessment Method |
| 767.5A | 80% of the students will pass the LCC-ST exam with a | LCC-ST exam scores. |

767.5A 80% of the students will pass the LCC-ST exam with a score of 171-178 or better.

767.5B 80% of the students will pass the PAE with a score of 75% or higher.

80% of the students will be rated by program 767.5C personnel at greater than or equal to 85% on their development in identifying interactions between various departments regarding the surgical client.

767.5D 50% of the employers surveyed will rate the students at greater than or equal to 85% in their ability to function as a team member.

PAE exam scores.

Clinical evaluations performed by the program director and clinical coordinator based on observing students' interactions with various departments.

Employer Survey (be sure this skill is adequately represented on the survey to provide a statistically significant finding).

Friday, March 27, 2009

Learning Outcome

Assessment Date

Learning Outcome

Students will assume personal responsibility for professional growth and continued learning.

Benchmark

Assessment Method

Assessment Date

767.6A 100% of the students will satisfactorily identify areas for professional growth and educational goals with strategies for achieving them.

Oakland Community College Dashboard

The purpose of the dashboard is to provide a data driven tool designed for the objective review of all curriculum offerings. Based on a common set of measures which apply to all curriculum the dashboard facilitates the systematic identification of well performing as well as ailing curriculum in order to support short and long range curriculum development.

In a rapidly changing economic and competitive environment it is necessary if not imperative to continually review curriculum offerings annually. Dashboard reports are a useful tool for monitoring program performance. In addition, they allow for an integrated approach for collecting, presenting, and monitoring data to meet long and short-term curriculum decision-making needs.

The Dashboard is based on seven measures which include:

- Sections Filled to Capacity
- Percent of Canceled Sections
- Credit Hour Trend Ratio
- Percent of Minority Students
- Percent of Withdrawals
- Percent of Incompletes
- Student Course Completion Rate

The following report provides summative information for the most recent academic year as well as detailed trend data on each measure over the past several years.

Program Dashboard Detail Report

Sections Filled to Capacity

Prefix SUR

Prefix Title Surgical Technology

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 |
|-----------------------------|---------|---------|---------|---------|
| Total Students | 76 | 165 | 143 | 129 |
| Total Capacity | 246 | 246 | 246 | 246 |
| Sections Filled To Capacity | 30.9% | 67.1% | 58.1% | 52.4% |

Definition:

Of all available seats, the percent that are filled based on end of term enrollment data. Calculation includes all four terms within the academic year Summer II, Fall, Winter and Summer I. This measure reflects the extent to which all credit "sections" are filled to their designated capacity e.g. allocated seats divided by the total number of available seats between July 1 and June 30. In particular, this measure provides one indication of the magnitude of student demand.

Ľ

Percent of Cancelled Sections

Prefix SUR

Prefix Title Surgical Technology

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 |
|-------------------------------|---------|---------|---------|---------|
| Active Sections | 10 | 8 | 8 | 8 |
| Cancelled Sections | 2 | 0 | 1 | 0 |
| Total Sections | 12 | 8 | 9 | 8 |
| Percent of Cancelled Sections | 16.7% | 0.0% | 11.1% | 0.0% |

Definition:

Of all offered credit sections the percent of sections that are cancelled as of the end of the term. Calculation includes all four terms during the academic year Summer II, Fall, Winter and Summer I. The calculation is based on a simple formula which takes the number of cancelled credit sections which is then divided by the total number of offered credit sections. This measure is one indicator of scheduling strategies and student demand.

Credit Hour Trend Ratio

SUR **Prefix Title** Surgical Technology

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 | |
|------------------------------|---------|---------|---------|---------|--|
| Credit Hours Year 1 | 488 | 384 | 300 | 446 | |
| Credit Hours Year 2 | 384 | 300 | 446 | 646 | |
| Credit Hours Year 3 | 300 | 446 | 646 | 575 | |
| Credit Hours Year 4 | 446 | 646 | 575 | 536 | |
| Credit Hours Period 1 | 391 | 377 | 464 | 556 | |
| Credit Hours Period 2 | 377 | 464 | 556 | 586 | |
| Credit Hours Ratio | 0.96 | 1.23 | 1.20 | 1.05 | |

Definition:

Prefix

Trend in credit hour enrollment based on a three year rolling average. Includes total credit hours over the academic year Summer II, Fall, Winter and Summer I. The calculation is based on those students enrolled on the terms official census date (one-tenth day). In order to establish a meaningful enrollment statistic which applies to large as well as small disciplines/programs a "ratio" is calculated based on a three year rolling average of student credit hours. The formula used to calculate this measure involves three simple steps:

a. Year 1 +Year 2 +Year 3 / 3 = Period 1b. Year 2 + Year 3 + Year 4 / 3 = Period 2c. (Period 2 -Period 1) /Period 1 =Ratio

If the ratio is greater than "1" this means there has been an enrollment increase. On the other hand, if the ratio is less than "1" this translates into an enrollment decline. The larger the number the larger the enrollment increase. Likewise, the lower the number the greater the enrollment decline.

Percent of Minority Students

PrefixSURPrefix TitleSurgical Technology

2006-07 2007-08 2004-05 2005-06 23 **Minority Students** 11 4 8 **Total Students** 18 20 129 24 **Percent of Minority Students** 22.2% 45.8% 40.0% 17.8%

Definition:

The percent of students who are minority in relation to all enrolled students. Minority status is self-reported by the student and includes African American, Asian, Hispanic, Native American Indian and Other. Calculation is based on the full academic year Summer II, Fall, Winter and Summer I. Percentages are computed on those students enrolled as of the end of the term and exclude missing data.

Percent of Withdrawals

| Prefix | SUR |
|--------|-----|
| | |

Prefix Title Surgical Technology

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 | |
|------------------------|---------|---------|---------|---------|--|
| Total Withdrawals | 2 | 8 | 6 | 11 | |
| Total Grades | 76 | 165 | 143 | 129 | |
| Percent of Withdrawals | 2.6% | 4.8% | 4.2% | 8.5% | |

Definition:

The percent of students who withdraw from their course after the term begins. Calculation includes the entire academic year Summer II, Fall, Winter and Summer I. Moreover, the calculations are derived from end of session data, after grades are posted. Percent of withdrawals is derived by dividing the total number of student initiated withdrawals by the total number of grades and marks awarded throughout the academic year. The Withdrawal-Passing (WP) and Withdrawal-Failing (WF) are considered Withdrawals (W). Meanwhile, calculations exclude: Audit (AU), Not Attended (N), Not Reported (NR), and Missing status. This is one indication of student success.

Percent of Incompletes

Prefix Title Surgical Technology

SUR

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 |
|------------------------|---------|---------|---------|---------|

| Total Grades | 76 | 165 | 143 | 129 |
| Percent of Incompletes | 6.6% | 2.4% | 0.0% | 2.3% |

Definition:

Prefix

The percent of students who receive an incomplete in their course. Calculation includes the entire academic year Summer II, Fall, Winter and Summer I. Moreover, the calculations are based on end of session files, after grades are posted. Percent of incompletes is derived by dividing the total number of incompletes by the total number of grades and marks awarded throughout the academic year. The Continuous Progress (CP) grade is considered an Incomplete (I). Meanwhile, calculations exclude: Audit (AU), Not Attended (N) Not Reported (NR), and Missing status. This is one indication of student success.

Student Course Completion Rate

Prefix SUR

Prefix Title Surgical Technology

| | 2004-05 | 2005-06 | 2006-07 | 2007-08 | |
|--------------------------------|---------|---------|---------|---------|--|
| Successful Grades | 69 | 153 | 134 | 112 | |
| Total Student Grades | 76 | 165 | 143 | 129 | |
| Student Course Completion Rate | 90.8% | 92.7% | 93.7% | 86.8% | |

Definition:

The percent of students who successfully complete a course with a grade of "C" or higher. Calculation includes grades from the entire academic year Summer II, Fall, Winter and Summer I. Student success rates are based on end of session data after grades have been posted. The following grades/marks are excluded from the calculation: Audit (AU), Not Attended (N), Not Reported (NR), and Missing status. This is one indication of student success.

Oakland Community College Program Dashboard Percent of Targets Achieved

The following graph and table depict the extent to which each of the seven dashboard measures met established college-wide benchmarks. Benchmarks (targets and trouble scores) are based on historical data and reflect a range within which each measure is expected to perform.

Measures which exceed the established benchmark are depicted in green, while those that fall short of the benchmark are shown in red. This information is useful in identifying areas of excellence, as well as areas of concern. As a consequence, this report can help to identify specific areas which may require additional attention by program staff.

The following projections are for those occupations most closely associated with this program based on national and regional labor market data. However, the extent to which specific OCC programs lead to employment within a given Standard Occupational Code (SOC) is dependent upon the way in which the U.S. Department of Labor groups specific occupations.

Occupational projections are presented at the "Detailed Standard Occupational Code" level as defined by the U.S. Department of Labor.

Although based on sound well tested economic modeling procedures, projections are subject to change based on emerging economic, political and social forces.

These projections reflect the four county region of Oakland, Macomb, Livingston and Wayne counties.

Projections are based on data from 24 major data sources, including the U.S. Department of Commerce, Bureau of Labor Statistics (BLS), Internal Revenue Service (IRS), and Census data. To forecast occupational demand at the county level, BLS data are regionalized and adjusted for emerging technological changes, the age of workers by occupation, and other factors affecting occupational demand.

Occupational forecast data was obtained from EMSI (Economic Modeling Specialists Inc.).

Surgical Technologist Occupation Definition SOC Detail Definitions

SOC Code 29-2055

Name Surgical technologists

Definition

Assist in operations, under the supervision of surgeons, registered nurses, or other surgical personnel. May help set up operating room, prepare and transport patients for surgery, adjust lights and equipment, pass instruments and other supplies to surgeons and surgeon's assistants, hold retractors, cut sutures, and help count sponges, needles, supplies, and instruments.

Examples

Operating Room Technician, Scrub Technician, Surgical Orderly

The following report provides detailed information on the knowledge, skills and abilities required for a given occupation. Consideration of these different competencies and levels of attainment while designing and reviewing curriculum will ensure that students enrolled in our programs are adequately prepared for employment.

In particular this report provides:

Importance of the competency to the occupation (in general terms)

- Not important
- Somewhat important
- Important
- Very important
- Extremely important

Importance of the competency to the occupation (in specific terms).

- 0 to 20 = not important
- 21 to 40 = somewhat important
- 41 to 60 = important
- 61 to 80 = very important
- 81 to 100 = extremely important

Level of Attainment in the competency required by the occupation:

- Basic = 0 to 24
- Intermediate = 25 to 49
- Advanced = 50 to 74
- Expert = 75 to 100

Surgical Technology - Occupational Knowledge

| Knowledge | Importance | Imp (0-100) | Level | Lvl (0-100) |

Oakland Community College Surgical Tech/Surgical First Assistant Marketing Strategies 2006/2007

Submitted: May 2006

Martin Orlowski, Director Office of Assessment & Effectiveness

Annessa Carlisle Marketing Consultant

Situational Analysis

The development of the Surgical First Assistant program is unique. Leveraging an exceptional relationship with William Beaumont Hospital has given OCC an opportunity to become a provider in a new occupation in which employer demand will exceed graduate supply for many years. The college now has the opportunity to take the curriculum that was created in the practical setting of the hospital and expand it as a full-fledged academic certificate program consisting of 21 credits and a clinical rotation that can be completed at any hospital. It also fits into the college's existing allied health programs, particularly the Surgical Technology program. With a product that was essentially created by the very marketplace it will serve, little adaptation is necessary and the college can fulfill its mission of meeting a need in the labor market.

5

Labor Market

The emergence of the role of Surgical First Assistants is relatively new, resulting from a need to reduce overall healthcare costs. Surgical First Assistants assume many operating room duties of the Physician Assistant, at substantially less cost. The position is attractive to those working as Surgical Techs, with increased responsibility and higher pay. It is also attractive to the healthcare institutions that reap the benefits of a more skilled person in the OR without the high salary of a full-fledged Physician Assistant. As healthcare institutions continue to seek ways to lower costs, the opportunities for SFAs will increase. Overall the growth rate for Surgical Techs and Physician Assistants is estimated at 17% and 38% respectively from 2004 to 2014. Many of these positions will actually be filled by SFAs. OCC will be the first college in Michigan with an accredited SFA program. There are currently 9 other programs in the country, of which 7 are CAAHEP accredited. Locally, Macomb Community College is starting a SFA program, however it is currently not accredited. Accreditation is key to the employer, with most hospitals requiring it upon hiring, or within six months.

Objectives: Opportunity vs. Capacity

While there is plenty of demand and it is expected to increase quickly, capacity and staffing issues limits the number of students OCC can initially put through the program. The objective for the first term offering is to attract 10 students. (This actually reflects keeping the program at its current size; while housed at Beaumont capacity was limited to 10.) The program is designed to be completed in 10 months. Future growth of the program will be determined by allocation of college resources, student demand, employer demand and potentially employer partnerships/resources.

Target Markets

Stringent qualifying criteria make the target population very distinct.

Entrance to the program is limited to individuals who:

• hold an Associate degree in an allied health field plus three years

scrubbing (OR) experience; or

• Are currently certified Surgical Technologists with a minimum one year OR experience; or

• Have military medical training with surgical assistant experience (eligibility will be assessed on an individual basis)

Since the Surgical First Assistant program is a step up the career ladder for surgical techs, this may be the most easily attracted group. Lists of certified Surgical Technologists can be obtained from the state Assembly of Surgical Techs.

Word about the career opportunities can also be spread through Clinical Administrators at hospitals. These people can serve as influencers for staff and often play a counseling role in career development. Surgical First Assistant represents a career step up from Surgical Technologists and is the highest level in the career path. The path of continuation would be to obtain a bachelor's or master's degree. In addition to the hospital career path, SFAs may have the opportunity to teach or work for private practices.

Other target markets include Schools of Allied Health. Surgical tech students from Macomb, Wayne County, Lansing Community Colleges and Baker should be made aware of the career advantages of continuing on to become SFAs.

Marketing Strategies

<u>Promotional Brochure</u>: A promotional brochure highlighting the career opportunities and the exclusive nature of the accredited program should be developed ASAP and used for targeted mailings and in response to inquiries. To maximize the usefulness of the brochure, it should be designed to also highlight the Surgical Technology program. This way, it will appeal to a larger potential audience – those beginning a career as a Surgical Tech and those looking to advance to Surgical First Assistant. This cross-marketing will be implemented in as many marketing strategies as possible. In the long-term, the

Surgical Technology program will act as a feeder to the First Assistant. Likewise, building interest in the FSA could boost enrollments by those who need first to become certified as Surgical Technologists. The brochure should include success stories and depict real-life scenarios, rather than an academic description. Initially mailings would be done to:

-All certified Surgical Technologists in the tri-county area

-Hospital Clinical Administrators

With respect to capacity, these mailings may result in a waiting list. If the response is not as high as anticipated, or the college is able to increase capacity, mailing lists can be expanded to the students in Allied Health Programs at other colleges and current OCC Allied Health students who may not be aware of this career option.

<u>Website:</u> The Surgical Tech/SFA programs should be featured on their own URL. This site should give detailed information on the career opportunities, admission requirements, credentialing and links to the state and national Association of Surgical Technologists Board Assemblies. Hospitals could be invited to post educational articles and even job postings on the site, crating a useful resource for those already working as Surgical Techs.

<u>Public Relations</u>: The fact that OCC has the first and only accredited SFA program in the state, and one of only 10 in the country, makes this newsworthy. OCC is at the leading edge of a trend in healthcare and needs to capitalize on the timing of announcing this.

The story should be pitched to all media, including local TV health reporters. Articles could also be submitted to hospital newsletters.

These strategies are low-cost and ideally need to be implemented prior to the registration period for the Fall 2006 semester. Public Relations can get the word out quickly and at no cost. This effort should begin immediately, as should work on the promotional brochure with a target print date of mid-July. The program already received some inquiries but has no or limited marketing materials. Development of the website should also begin concurrently.

Long-Term Strategies

This report focuses on short-term strategies that will fill the first and most likely second semester offering of the program. Looking down the road, the program could expand its marketing efforts geographically once an on-line program was developed and eventually have graduates from around the country. This would require full-time faculty commitment from the college. Since the clinical portion can be performed at any hospital, it is possible the OCC SFA program could become promoted nationally through links on state assembly websites, national groups and advertising in the Surgical Technologist Journal.
