

DALNET'S Horizon Indexes Task Force

List of Chosen Indexes

Out of 7/7/98 Indexes Task Force Meeting

QUALIFICATIONS

1. Due to new instructions received from the DALNET Steering Committee, the Indexes Task Force reexamined its 6/12/98 index choices. We were to disregard conflicting information received about limits in the number and types of indexes possible, and instead were to present the Steering Committee with a list of all desired staff and public indexes arranged in priority order. This new list of prioritized indexes is attached.
2. For the staff indexes, we strongly recommend that High and Medium Priority indexes serve as indexes for the union catalog and as standard base indexes for individual library databases within DALNET. If it is deemed feasible, the indexes in the Low Priority category are also somewhat desirable. Indexes in the Super Low category are not deemed desirable for staff members by the Task Force, but are included for the review of the Steering Committee.
3. For the public indexes, we strongly recommend that High and Medium Priority indexes serve as indexes for the union catalog and as standard base indexes for individual library databases within DALNET. If it is deemed feasible, the indexes in the Low Priority category are also somewhat desirable. Indexes in the Super Low category are not deemed desirable by the Task Force, but are included for the review of the Steering Committee.
4. The Task Force was advised that individual member libraries *may* be allowed to choose fewer, different, or additional indexes than the base indexes prescribed, but cautions that results from broadcast searching across DALNET catalogs may be adversely affected if member indexes deviate from each other.
5. Due to time limitations, some MARC maps for indexes in the Low and Super Low categories are not attached. If the Steering Committee needs MARC maps that are not on the map list, they are available upon request within 48 hours.
6. Some of the attached indexes may not give the intended search results when used, due to the *unconfirmed possibility* that the Horizon system cannot distinguish names vs. titles in the 1XX fields, i.e. 130s are seen as authors even when they are not. Default maps from Horizon and test database results at UDM seem to indicate that this is the case.
7. When DALNET members choose to comply with the DALNET union and base indexes in their own individual catalogs, they are reminded that MARC maps for these indexes should also remain consistent with the MARC maps used in the union catalog and other DALNET libraries.

List of Chosen Indexes

7/7/98

Page 2

8. Finally, note that there are a few High and Medium Priority public indexes that do not have corresponding staff indexes. We were given information during a June 22, 1998 conference call with Ameritech that it was not necessary for public indexes to always have corresponding staff indexes.
